

MOUNTFIELD'S DEFIBRILLATORS

Mountfield has three defibrillators.

- **One is the left-hand side of the Village Hall as you face the front door.**
- **One is on the junction of Solomon's Lane and Hoath Hill.**
- **One is on the outside wall of the Mountfield Heath School at John's Cross.**

You need no medical knowledge to use the defibrillators, they have been specifically designed for use by the general public.

No instructions are necessary - just do the following

- 1. Ring 999 - this is the very FIRST thing you must do.**
- 2. Remove the defibrillator from its cabinet.**
- 3. Unzip the case.**
- 4. Press the GREEN button.**

THEN FOLLOW THE VOICE PROMPTS - the defibrillator will "talk" you through everything you have to do, it has been specifically designed for use without written instruction and will also prompt you again to phone 999.

It is also important to note that the defibrillator will only work if the person is in cardiac arrest, it actually analyses the heart condition. So if the person is having a heart attack, faints or is in collapse for any other reason - apart from cardiac arrest - the defibrillator will not activate. You will have phoned 999 anyway and help is on the way.
